

Stakeholder Requirements Document: Global Logistics BI

BI Professional:

Mohamed Alneel, BI Professional

Client/Sponsor:

Logistics Operations Management / Senior Management

Business problem:

The organization needs a centralized Business Intelligence solution to monitor and analyze logistics operations across shipments, routes, customers, carriers, drivers, vehicles, warehouses, and weather conditions. Existing operational data needs to be transformed into clear, reliable, and actionable insights to support faster decision-making, identify delays and bottlenecks, and improve overall logistics performance.

Stakeholders:

- Senior Management / Executive Leadership
- Logistics Manager
- Operations Manager
- Fleet Manager
- Finance Manager
- Customer/Sales Manager
- Risk and Planning Team

Stakeholder usage details:

Stakeholder	How they will use the BI solution
Senior Management	Monitor overall logistics performance through high-level KPIs and trends.
Logistics Manager	Analyze shipment volumes, delays, transit times, routes, and carriers.
Operations Manager	Identify operational bottlenecks and investigate shipment performance.
Fleet Manager	Evaluate driver performance, vehicle efficiency, fuel consumption, and capacity.
Finance Manager	Monitor logistics revenue, costs, and financial performance.
Customer/Sales Manager	Analyze customer contribution, revenue, and customer segments.
Risk & Planning Team	Analyze weather conditions, road conditions, and their impact on shipment delays.

Primary requirements:

1. Provide a centralized view of logistics performance.
2. Monitor **Total Shipments** and shipment status.
3. Analyze **Average Transit Time** and **Average Delay**.
4. Identify high-volume and high-delay routes.
5. Compare performance across transportation modes and carriers.
6. Monitor driver performance and experience.

7. Analyze vehicle efficiency, fuel consumption, and cargo capacity.
8. Analyze customer revenue and segmentation.
9. Evaluate the impact of weather severity and road conditions on shipment delays.
10. Provide geographic and route-level analysis through maps.
11. Provide interactive filters for relevant business dimensions.
12. Present clear and consistent KPI definitions.
13. Enable stakeholders to identify trends, bottlenecks, and areas requiring operational improvement.
14. Deliver the insights through interactive **Tableau dashboards** suitable for executive and operational decision-making.
